

KABPRO Plan & Entitlements Blueprint

Audience: Product, sales, engineering, leadership Scope: Whole product (Superadmin catalog + Admin enforcement + future self-serve) Status: Catalog partial - Enforcement not wired

1. Executive summary

KABPRO Admin exposes a full fleet operating system (14 modules). Superadmin can already define country-priced plans, marketing benefits, soft limits, and assign trials - but Admin ignores those plans today.

This blueprint defines how customers choose and buy access:

- Benefits - human marketing copy
- Features - machine entitlement keys that gate modules/APIs
- Quotas - vehicles, drivers, seats, agencies
- Seat types - Admin / Manager / Operator (customizable)
- Country pricing - one plan row per market
- Trials - fully managed timeline with Admin visibility

Do not start with payment gateways. Ship catalog truth -> Admin visibility -> API enforcement -> trial automation -> seats -> commerce.

2. Current gap

Capability	Today
Plan catalog (name, country, price, benefits, limits)	Superadmin [OK]
Assign Trial / Active / Expired	Superadmin [OK]
Feature matrix (boolean/numeric keys)	[X] (benefits are copy only)
Admin "My plan" / trial banner / usage bars	[X]
API middleware requireEntitlement	[X]
Quota checks on create vehicle/driver/user	[X]
Cron expire trials	[X]
Seat packs + RBAC	[X]
Add-ons / org overrides / Stripe-Razorpay	[X]

3. Recommended commercial tiers

One catalog row per (code x country). Prices are illustrative; Superadmin edits live amounts.

Tier	Who it is for	Core unlock	Soft quotas (example IN)	Trial
Free / Trial	Evaluate product	Dashboard + Vehicles + Drivers list + Bookings lite	5 veh - 10 drivers - 2 users	14 days
Starter	Small taxi / trip fleets	+ Fuel/FASTag + Compliance + Maintenance	25 veh - 50 drivers - 5 users	14 days
Professional	Dept + trip operators	+ Full Departments (contracts/billing/GST) + Profitability + Revenue	100 veh - 200 drivers - 15 users	14 days
Growth	Multi-city / multi-agency	+ Multi-agency + Activity export + higher seats	250 veh - 500 drivers - 40 users	14 days

Enterprise / Custom	Large fleets / tenders	All modules + SLA + custom entitlements + add-ons	Custom / unlimited	30 days
---------------------	------------------------	---	--------------------	---------

Customer-facing benefits vs machine features

Type	Purpose	Used for access control?
Benefits { title, detail }	Pricing cards, onboard, upgrade screens	No
Features { key, enabled, value? }	Admin nav + API gates	Yes

Same plan code can share entitlement keys across countries while showing different currency prices and local benefit wording.

4. Starter feature matrix

Capability	Free/Trial	Starter	Professional	Growth	Enterprise
Dashboard	Yes	Yes	Yes	Yes	Yes
Vehicles + Drivers CRUD	Yes	Yes	Yes	Yes	Yes
Bookings	Yes	Yes	Yes	Yes	Yes
Fuel / FASTag / Maintenance	Limited	Yes	Yes	Yes	Yes
Compliance alerts	Yes	Yes	Yes	Yes	Yes
Departments + GST billing	-	-	Yes	Yes	Yes
Weekend billing	-	-	Yes	Yes	Yes
Profitability + Revenue	-	-	Yes	Yes	Yes
Driver payroll	-	Add-on	Yes	Yes	Yes
Multi-agency	-	-	-	Yes	Yes
Activity export	-	-	-	Yes	Yes
Push notifications	-	Yes	Yes	Yes	Yes
Voice fill	-	Add-on	Yes	Yes	Yes
Live GPS tracking	-	-	Add-on	Add-on	Yes
Custom entitlements / SLA	-	-	-	-	Yes

5. Dynamic pricing model

5.1 Country base price

- Unique index on (code, country)
- Fields: priceMonthly, priceYearly, currency, pricingLabel (Free / Custom), featured, isActive
- Seed markets today: IN, AE, US (UI also lists GB, SG, AU, CA, SA)

5.2 Add-ons (modular extras)

Priced separately or bundled:

- Extra admin seats
- GPS / live tracking pack
- SMS / WhatsApp

- Voice fill
- Multi-agency unlock
- Weekend billing unlock
- Payroll unlock on Starter

5.3 Enterprise / custom deals

- Clone a catalog plan -> override prices + entitlements + trial days per organization
- Overrides never rewrite the global catalog

5.4 Superadmin plan editor sections

Section	Fields	Purpose
Identity	name, code, category, description, sortOrder, isActive, featured	Catalog listing
Market	country, countryName, currency	Local pricing
Prices	priceMonthly, priceYearly, pricingLabel, billingCycles[]	Checkout / invoices later
Trial	trialDays, trialEntitlements (optional subset)	What trial unlocks vs paid
Benefits	benefits[title, detail, highlight]	Marketing copy
Features matrix	features[key, enabled, value?]	Enforcement
Quotas	limits.vehicles, drivers, users, agencies, bookingsPerMonth, storageMb	Caps + upgrade CTA
Seat packs	seatTypes[role, included, priceExtra]	Admin / Manager / Operator
Add-ons	allowedAddOnIds[]	Which extras attach

6. Seat & user-type model

Separate how many people (plan seats) from what each person can do (role permissions inside unlocked modules).

Seat type	Default permissions	Plan control
Admin	Full unlocked modules; agency settings; invite seats	Counts toward limits.users; often 1-3 included
Manager	Money + departments + profitability write; no agency delete	Included or add-on seat pack
Operator	Bookings, duty logs, attendance, fuel entry	Cheapest seat; dispatch volume
Viewer (future)	Read-only dashboards / reports	Optional Enterprise add-on
Driver app seat (future)	Driver mobile login	Maps to limits.max_drivers

Customization path: Superadmin (or Enterprise deal) attaches a permission override JSON per org - e.g. unlock departments.weekend_billing for a Starter customer, or cap Operator write on payroll.

7. Trial -> paid timeline (fully managed)

Day / event	System action	Who sees it
Org onboard	Auto-assign Trial on market STARTER (or chosen plan); set trialEndsAt	Superadmin event + Admin banner
During trial	Resolve entitlements = trial matrix (equal to paid or subset)	Admin: usage meters + "X days left"
D-7 / D-3 / D-1	Notify primary admin (in-app; email later)	Admin notifications - Superadmin funnel

trialEndsAt	Cron: Trial -> Expired (or PastDue if payment pending)	Admin read-only / upgrade wall
Convert	Assign Active + billingCycle; snapshot entitlements	Superadmin assign or future self-serve
Renew / fail	Active -> PastDue -> Cancelled with grace days	Both consoles + audit trail

Superadmin must manage

- Plan catalog CRUD + seed markets
- Feature matrix editor (toggle keys)
- Benefits editor (marketing)
- Assign / extend / end trial
- Org timeline: onboard -> trial -> paid -> churn
- Usage vs limits snapshot per org

Admin must show

- Current plan name + country price
- Trial countdown / expiry wall
- Usage bars (vehicles, drivers, seats)
- Locked module upgrade CTAs
- Included benefits list
- Request upgrade / contact sales

8. Enforcement architecture

Layer	Responsibility	Status
SubscriptionPlan	Catalog: prices, benefits, feature keys, quotas, seat packs	Partial
OrganizationSubscription	Assignment + trial dates + status + entitlement snapshot	Partial
OrgEntitlementOverride	Per-org custom unlocks / caps	New
PlanAddOn + OrgAddOn	Extra seats / modules	New
Server middleware	requireEntitlement(key) on mutating APIs; quota on create	New - critical
Admin EntitlementProvider	Hide/disable nav from GET /billing/me	New - critical
Cron / jobs	Expire trials, PastDue dunning, usage snapshots	New

Resolution order

- Base plan features
- Add-ons
- Org overrides
- Trial subset (if status = Trial)
- Expired = read-only / block create

Always enforce on API, never UI-only.

9. Admin modules -> suggested tier (packaging view)

Module	Entitlement keys	Suggested tier
Dashboard	module.dashboard	All plans

Vehicles	vehicles.* - limits.max_vehicles	Starter+
Drivers	drivers.* - limits.max_drivers	Starter+ / Pro payroll
Departments	departments.*	Professional+
Bookings	bookings.*	Starter+
Expenses	expenses.*	Starter+
Profitability	profitability.*	Professional+
Revenue	revenue.*	Professional+
Compliance	compliance.*	Starter+
Maintenance	maintenance.*	Starter+
Activity	activity.*	Growth+
Notifications	notifications.*	Starter+ / Pro push
Support reports	support.tickets	All plans
Multi-agency	agency.multi - agency.create	Growth+

Full module inventory: see 01-ADMIN-FEATURES.

10. Implementation roadmap

Phase	Scope	Outcome
P0 - Catalog truth	Extend SubscriptionPlan with features[] keys + seatTypes; keep benefits separate; Superadmin matrix UI	Plans describe real product access
P1 - Resolve + show	GET /api/billing/me; Admin Plan/Billing page + trial banner + usage bars	Customers see what they have
P2 - Enforce	Server entitlement middleware + create quotas; hide locked nav	Plans actually mean something
P3 - Trial lifecycle	Cron expire; D-7/3/1 notifies; Superadmin org timeline	Trials fully managed
P4 - Seats & RBAC	Invite against seat packs; gate actions by role x entitlement	User-type customisation
P5 - Commerce	Add-ons, org overrides, Razorpay/Stripe (country), invoices	Self-serve + Enterprise deals

11. Success criteria

- Sales can describe 5 clear tiers with a feature matrix PDF
- Superadmin can flip a feature key and Admin loses/gains a module without a deploy of hard-coded flags
- Trial orgs see countdown and cannot silently keep Pro features after expiry
- Create vehicle/driver/user fails with a clear upgrade error when over quota
- Enterprise deals use overrides, not fork of catalog code
