

KABPRO Superadmin Platform Guide

Audience: Platform operators, engineering App: Superadmin console (superadmin/) Production URL: <https://superadmin.kabpro.pro> Local URL: <http://localhost:3100>

1. Purpose

Superadmin is the platform control plane for KABPRO - not a fleet tenant app.

It manages:

- Organizations (customers) and projects
- Onboarding new fleet admins
- Leads, funnel, and admin login/return tracking
- Subscription plans (country-based catalog)
- Subscription assignments and trials
- Platform activity events
- Reports / exports (Excel, PDF, Word)

Fleet day-to-day ops stay in Admin (admin.kabpro.pro).

2. Access & security

Login

- Email + password against API `/api/superadmin/auth/login`
- Role required: superadmin
- Session stored in sessionStorage (tab-scoped)

Dev bootstrap

Configured in `server/.env.development` (example):

```
SUPERADMIN_EMAIL=superadmin@kabpro.com
SUPERADMIN_PASSWORD=SuperAdmin@123
SUPERADMIN_NAME=KABPRO Superadmin
SUPERADMIN_SYNC_PASSWORD=true
SUPERADMIN_APP_URL=http://localhost:3100
```

On API boot, ensure Superadmin creates or (in development) re-syncs the password. Demo credentials on the login UI appear only when `import.meta.env.DEV` && `MODE === 'development'`.

Production

Set `SUPERADMIN_EMAIL` / `SUPERADMIN_PASSWORD` / `SUPERADMIN_APP_URL` in `server/.env.production`. Never commit real secrets. See `server/docs/DEPLOYMENT.md`.

Auto logout

- Any Superadmin API response 401 or 403 (except login) clears session, disconnects socket, and forces logout
- Applies to JSON calls and binary exports (`apiFetch` / `apiFetchBlob`)

CORS

API must allow <https://superadmin.kabpro.pro> (and <http://localhost:3100> in development).

3. Navigation / pages

Page	Role
Overview / Board	Live KPIs, recent platform events, socket toasts
Organizations	List / inspect onboarded orgs
Projects	Platform projects linked to orgs / agencies
Users	Platform-visible users
Onboard	Create org + primary admin + agency + project + auto Trial
Leads	CRM-style inbound leads + funnel stats + Export
Plans & subscriptions	Full plan CRUD, seed markets, assign trials, status patches
Reports	Dataset filters + single Export menu (xlsx / pdf / doc)

4. Organizations & onboard

Onboard flow (high level)

- Superadmin submits org + primary admin details
- Server creates:
 - Organization
 - Admin User (fleet role)
 - Agency
 - Project
- Auto-starts Trial OrganizationSubscription on market STARTER (or fallback plan)
- Emits platform event org_onboard

Tracking

Fleet Admin logins emit admin_login / admin_return (skipped for pure superadmin accounts).

5. Leads & funnel

Lead fields

Company, contact, email, phone, city, source, status, notes, interested plan, linked organization

Statuses

New - Contacted - Qualified - Trial - Won - Lost

Funnel metrics

- Admin logins
- Return visits
- Org onboards
- Active trials
- Leads by status

UI pattern

- New lead (primary, left)
 - Export (right) - opens options card (format + filters), not multiple format buttons
-

6. Plans & subscriptions

Plan model (catalog)

Fully managed per country:

Field group	Contents
Identity	name, code, category (Free/Starter/Professional/Growth/Enterprise/Custom)
Copy	description, benefits[{{title, detail}}, legacy features[]
Market	country (ISO), countryName, currency
Pricing	priceMonthly, priceYearly, pricingLabel
Trial	trialDays
Quotas	limits.vehicles / drivers / users
Ops	featured, isActive, sortOrder

Unique: (code + country).

Superadmin UI capabilities

- Create / edit / delete plans
- Filter by country and category
- Seed default markets (IN / AE / US x Starter->Enterprise)
- Assign organization -> plan (start trial toggle)
- Patch subscription status (e.g. Activate, End)

Important

- Assignments are Superadmin-only today
- Plans are not yet enforced in fleet Admin
- Next: machine feature keys + Admin billing page (see 02-PLAN-ENTITLEMENTS-BLUEPRINT)

7. Reports & export

Datasets

- Organizations
- Leads
- Activity / events
- Subscriptions
- Plans catalog

Filters

- Date from / to
- Status / type
- Country (plans / subscriptions)
- Search (leads / orgs)

Download UX

- One Export button -> options card
- Choose file format: Excel (.xlsx), PDF (.pdf), Word (.doc)
- Download applies current filters

API

GET /api/superadmin/export?kind=&format=&from=&to=&status=&country=&search=

8. Realtime

- Superadmin sockets join room superadmin
 - Platform events emit to that room
 - Board page shows live toasts for onboard / lead / subscription activity
-

9. API surface (prefix /api/superadmin)

Area	Examples
Auth	POST /auth/login, session verify
Orgs / projects / users	list, detail, onboard
Leads	CRUD, convert, funnel
Events	list platform events
Plans	list, upsert, delete, seed-defaults
Subscriptions	list, assign, patch status
Export	filtered binary download

All mutating/list routes require authenticated superadmin role.

10. Deploy checklist

- Build superadmin with production VITE_API_URL / VITE_SOCKET_URL / VITE_APP_URL
- Publish superadmin/dist to /srv/apps/cabs/superadmin/dist
- Nginx server_name superadmin.kabpro.pro -> that dist
- Cloudflare Tunnel hostname superadmin.kabpro.pro -> http://127.0.0.1:80
- API CORS includes https://superadmin.kabpro.pro
- Set SUPERADMIN_* env on API and restart PM2

CI workflow builds admin + superadmin on push to main when paths change.
