

00 - Implementation overview

Goal: One subscription catalog drives Landing prices, Admin module access, and Server API enforcement.

1. System diagram

```
????????????????????
?   Superadmin   ?
? edit plans / trial ?
????????????????????
? CRUD
v
????????????????????      ?????????????????????      ?????????????????????
?   Landing      ?????????      Server      ?????????      Admin dashboard?
? public price ? GET ? SubscriptionPlan ? GET ? /billing/me ?
? + inquiry    ? POST ? OrgSubscription ? + ? can(feature) ?
???????????????????? lead ? resolveEntitlements? MW ?????????????????????
? requireEntitlement ?
????????????????????????
```

2. What each app consumes

App	Reads	Writes	Must never
Landing	Active plans for a country (name, price, benefits, CTA)	Inquiry / lead	Decide feature access
Admin	Resolved entitlements + usage + trial	Upgrade request	Bypass API with UI-only unlocks
Server	Org + plan + overrides	Enforce quotas / features	Trust body flags like skipLimit
Superadmin	Full catalog + all orgs	Plans, assign trial, overrides	Soft-delete plans still in use

3. Data that travels

Catalog row (marketing + packaging)

- Identity: name, code, category
- Market: country, currency, prices
- Benefits: human bullets for Landing / Admin billing page
- Entitlements: machine keys for Admin + Server
- Limits: vehicles, drivers, users, agencies
- Trial: trialDays (+ optional trial key subset)

Resolved payload for Admin (GET /api/billing/me)

- subscription.status, trialEndsAt, daysLeft
- plan summary + benefits
- features map { [key]: true|false|number }
- limits + usage

Public payload for Landing (GET /api/public/plans?country=IN)

- Active plans only
- name, description, prices, benefits, featured, trialDays
- No internal entitlement keys required (optional summary labels ok)

4. Implementation phases (summary)

Phase	Focus	Apps touched
P0	Entitlement keys on plan + Superadmin matrix UI	Server, Superadmin
P1	/billing/me + Admin Plan page + trial banner	Server, Admin
P2	Middleware + nav gates + quota on create	Server, Admin
P3	Trial cron + reminders + Superadmin timeline	Server, Superadmin, Admin
P4	Seat packs + RBAC	Server, Admin
P5	Landing dynamic pricing + payments / add-ons	Landing, Server, Admin

Details: 05-PHASED-CHECKLIST.md

5. File ownership (suggested)

Concern	Primary paths
Plan schema	server/src/models/SubscriptionPlan.js
Org subscription	server/src/models/OrganizationSubscription.js
Resolve service	server/src/services/entitlements.js (new)
Middleware	server/src/middleware/requireEntitlement.js (new)
Billing routes	server/src/routes/billing.js (new)
Public plans	server/src/routes/publicPlans.js (new)
Admin provider	admin/src/context/EntitlementContext.tsx (new)
Admin billing UI	admin/src/components/modules/billing/ (new)
Landing pricing	landing/app/components/Pricing.tsx
Superadmin plans UI	superadmin/src/pages/SubscriptionsPage.tsx

6. Environments

Env	Landing	Admin	Superadmin	API
Dev	:3001	:3000	:3100	:5000
Prod	kabpro.pro	admin.kabpro.pro	superadmin.kabpro.pro	api.kabpro.pro

Public plan endpoint must be CORS-open for Landing origin (or same-site via nginx proxy). Prefer public read-only routes without auth cookies.

7. Definition of done (whole system)

- [] Superadmin can toggle departments.monthly_billing on a plan
 - [] Admin nav hides Departments billing when feature false
 - [] POST create vehicle returns QUOTA_VEHICLES when over limit
 - [] Landing Pricing section renders API plans for selected country
 - [] Inquiry with interested plan creates Superadmin lead
 - [] Trial expiry cron flips status; Admin shows upgrade wall
