

04 - Superadmin catalog ops (implementation)

How Superadmin (superadmin/) finishes the catalog so Landing + Admin can consume it.

App: <https://superadmin.kabpro.pro> - local :3100 Existing: Plans CRUD, country filters, benefits, prices, assign trial - see docs/03-SUPERADMIN-PLATFORM.md

1. Gaps to close

Need	UI change
Machine entitlements	Feature matrix toggles on plan form
Seat packs	Seat type rows (role + included + extra price)
Trial subset	Optional "trial features differ from paid"
Seed with entitlements	Update Seed markets to write keys
Org timeline	Org detail: onboard -> trial -> events -> usage
Landing sync	After save, public catalog updates (cache TTL)

2. Plan form extensions

Extend SubscriptionsPage (or split PlanEditorModal):

Tabs / sections

- Basics - name, code, category, description, country, currency
- Pricing - monthly, yearly, pricingLabel, trialDays, featured, active
- Benefits - title/detail list (Landing + Admin billing)
- Features - searchable checklist of entitlement keys grouped by module
- Limits & seats - vehicles/drivers/users + seatTypes table

Features UI pattern

- Group by module (Vehicles, Drivers, Departments, ?)
- Toggle enabled
- Optional value input for numeric keys (if any)
- "Apply Professional defaults" button (loads matrix template)

Persist via existing POST /api/superadmin/plans with new fields.

3. Seed defaults

Update seedDefaultPlans in platformOpsController.js to include entitlements per template using the blueprint matrix:

Code	Includes (examples)
STARTER	dashboard, vehicles, drivers.crud, bookings, expenses, compliance, maintenance
PROFESSIONAL	+ departments., profitability., revenue.*, drivers.payroll
GROWTH	+ agency.multi, activity.export, higher limits
ENTERPRISE	all keys true, custom limits

After seed, Landing and Admin both see consistent packaging.

4. Org subscription timeline (P3 UI)

On organization detail (or subscriptions table expand):

- Status pill + trialEndsAt countdown
 - Plan code / country / price snapshot
 - Recent PlatformEvent rows for that org
 - Buttons: Extend trial (+7d), Activate, Expire, Change plan
 - Usage snapshot (call internal resolve or counts endpoint)
-

5. Ops playbook

Launch a new market (e.g. SG)

- Seed or duplicate plans with country=SG, currency=SGD
- Set prices + benefits in local language if needed
- Confirm GET /api/public/plans?country=SG
- Landing country chip includes SG

Give a customer custom features

- Prefer assign higher plan, or
- (P4+) OrgEntitlementOverride enable keys without changing catalog

Stop a churned org

- Patch subscription -> Expired / Cancelled
 - Admin resolve -> read-only / upgrade wall
-

6. Implementation checklist (Superadmin)

- [] API accepts entitlements / seatTypes on upsert
 - [] Plan editor Features tab
 - [] Seed writes entitlements
 - [] Org timeline panel
 - [] Manual "Extend trial" action
 - [] Confirm Export still works for plans/subscriptions
-
