

05 - Phased implementation checklist

Track shipping order across Server, Admin, Landing, Superadmin.

Legend: [] todo - [x] done - [-] deferred

P0 - Catalog truth

Outcome: Plans store real entitlement keys; Superadmin can edit them.

Server

- [] Add entitlements, seatTypes, trialEntitlements to SubscriptionPlan
- [] Add server/src/constants/entitlementKeys.js
- [] Extend buildPlanPayload / upsert validation
- [] Update seedDefaultPlans matrices
- [] Migration / backfill script for existing plans

Superadmin

- [] Features matrix UI on plan create/edit
- [] Seat packs fields
- [] Re-seed markets and verify IN/AE/US

Admin / Landing

- [-] No consumer changes required yet

Exit criteria: Plan JSON in Mongo shows entitlement keys; seed idempotent.

P1 - Resolve + show (Admin)

Outcome: Fleet users see their plan, benefits, trial, usage.

Server

- [] services/entitlements.js -> resolveEntitlements
- [] Link Agency/User -> Organization
- [] GET /api/billing/me
- [] POST /api/billing/upgrade-request -> PlatformLead

Admin

- [] EntitlementProvider
- [] Plan status banner
- [] /billing page (plan, benefits, usage bars)
- [] Soft-fail if API old

Superadmin

- [] Confirm assign trial visible in Admin within seconds

Landing

- [-] Still hardcoded OK

Exit criteria: Test org Admin shows correct plan name + daysLeft.

P2 - Enforce

Outcome: Locked features cannot be used via API or UI.

Server

- [] requireEntitlement middleware
- [] requireQuota middleware
- [] Attach to vehicles, drivers, department billing first
- [] Env ENTITLEMENTS_ENFORCE=true
- [] Legacy empty entitlements = allow (until seeded)

Admin

- [] Sidebar featureKey gating
- [] RequireFeature route wrapper
- [] Quota gate on Add Vehicle / Add Driver
- [] Handle FEATURE_LOCKED / QUOTA_* without logout

Superadmin

- [] Toggle a key -> Admin updates after refresh

Landing

- [-] N/A

Exit criteria: Starter org cannot open monthly department billing; over-quota create returns 403.

P3 - Trial lifecycle

Outcome: Trials expire automatically; reminders fire.

Server

- [] Daily expire job
- [] D-7 / D-3 / D-1 notifications
- [] Platform events on expire / extend

Superadmin

- [] Org timeline UI
- [] Extend trial (+7 / +14) action

Admin

- [] Expired wall / read-only messaging
- [] Banner urgency for D-3 / D-1

Landing

- [-] N/A

Exit criteria: Past trialEndsAt -> status Expired without manual patch.

P4 - Seats & RBAC

Outcome: Seat counts + role permissions inside unlocked modules.

Server

- [] Enforce limits.users on invite
- [] Role permission matrix middleware (optional separate from entitlements)

- [] OrgEntitlementOverride collection + Superadmin UI

Admin

- [] Invite UI shows seats used / remaining
- [] Hide actions by role (operator vs admin)

Superadmin

- [] Seat packs on plan editor
- [] Per-org override editor

Landing

- [-] Optional: show "X users included" from limits

Exit criteria: Cannot invite beyond seat cap; operator cannot access payroll settle.

P5 - Landing + commerce

Outcome: Public pricing is live; path to pay / contact is clear.

Server

- [] GET /api/public/plans?country=
- [] POST /api/public/leads (rate-limited)
- [] (Later) Razorpay/Stripe checkout session
- [] Add-ons models (optional)

Landing

- [] NEXT_PUBLIC_API_URL
- [] Dynamic Pricing.tsx + country switcher
- [] CTA -> inquiry with interestedPlan
- [] Fallback if API down

Admin

- [] Upgrade CTA deep-links / post-payment refresh entitlements

Superadmin

- [] Lead appears from Landing inquiry
- [] Price edit reflects on Landing after cache TTL

Exit criteria: Change Professional IN price in Superadmin -> Landing shows new price; inquiry creates lead with plan code.

Cross-cutting always

- [] Docs updated when keys added (docs/01 + entitlementKeys)
 - [] No secrets in client bundles
 - [] Enforce on server; UI is convenience only
 - [] Auto-logout only on 401 auth failure - not on feature 403
-

Suggested first sprint (2 weeks)

- P0 schema + seed + Superadmin matrix
- P1 /billing/me + Admin banner/page
- Start P2 on vehicles quota + one department feature

Landing dynamic pricing can wait until catalog is stable (end of P0/P1).
