

Implementation guides

How to implement the KABPRO plan / entitlements system and consume it across:

Surface	Folder	Role
Server / API	server/	Source of truth, resolve + enforce
Admin dashboard	admin/	Gate modules, show trial / usage
Landing	landing/	Public pricing + lead capture
Superadmin	superadmin/	Catalog + assign trials (already partial)

Product specs live one level up in docs/ (01-04). This folder is the engineering how-to.

Documents

#	File	Purpose
0	00-IMPLEMENTATION-OVERVIEW.md	End-to-end flow, phases, ownership
1	01-SERVER-IMPLEMENTATION.md	Models, resolve service, middleware, public + billing APIs
2	02-ADMIN-DASHBOARD-CONSUMPTION.md	EntitlementProvider, nav gates, trial banner, quota UX
3	03-LANDING-PAGE-CONSUMPTION.md	Dynamic pricing from API, country, inquiry -> lead
4	04-SUPERADMIN-CATALOG-OPS.md	Extend plan editor, seed entitlements, org timeline
5	05-PHASED-CHECKLIST.md	P0-P5 task checklist for shipping

Golden rule

Landing = marketing view of catalog (benefits + prices)
Admin = runtime view of resolved entitlements (features + limits + usage)
Server = only place that decides allow / deny
Superadmin = edits catalog and subscriptions

Never trust the client alone for feature access.
