

Fleet Contract - Duty Log - Bill Flow

Department Contract → Duty Log → Monthly Bill — Developer Flow Doc

Purpose of this doc: Cab owner jo govt department / corporate / college ko vehicle tender pe deta hai, uska poora billing cycle. 3 modules hain jo aapas mein connected hain. Ye doc batata hai ki har field kaha se aata hai, kaha use hota hai, aur konse fields hataane/add karne hain.

1. Module: Department Contract

Kab banta hai: Ek baar, jab cab owner ko kisi department/college se vehicle ka tender milta hai. Per vehicle-department pairing ek contract.

Role: Master record. Duty log aur bill dono is se data khinchte hain.

Fields

Field	Type	Required	Kaha use hota hai
Department name	text	required	Bill header, contract header
Contact person / phone	text	optional	Billing alerts
Assigned vehicle	dropdown/text	optional	Duty log ke “Vehicle” dropdown mein option banta hai
Designated driver	dropdown/text	optional	Duty log ke “Driver” dropdown mein option banta hai
Monthly base rate (₹)	number	required	Bill ka base line item + GST is pe lagta hai
Included monthly KM	number	optional	Bill mein total KM ke saath compare hota hai
Extra KM rate (₹/km)	number	optional	Bill mein (total KM – included KM) × rate Future use —

Extra hour rate (₹/hr)	number	optional	abhi hourly billing implement nahi ho raha, field rakho
Night/late shift charge (₹/day) — NEW FIELD	number	optional	Bill mein (night shift days count) × rate, GST is pe bhi lagta hai
Contract start date	date	required	Validity check
Contract end date	date	required	Validity check — expire hone pe naye duty log block ho sakte hain (business call)

Important: Base rate, extra KM rate, extra hour rate, night charge rate — ye saare sirf **billing time pe use hote hain**. Duty log form mein ye kahin nahi dikhte.

2. Module: Daily Duty Log

Kab banta hai: Har din, jab vehicle chalti hai. **Do source hain:**

1. **Admin manual entry** — admin panel se form fill karke
2. **Driver app** — driver “Start duty” dabata hai (start odometer lock ho jata hai), din khatam pe “End duty” dabata hai (end odometer lock). System khud calculate karta hai total KM = end – start, aur naya Duty Slip No. auto-generate hota hai.

Dono se aaye logs **ek hi table** mein store hote hain — admin ko sab ek jagah dikhte hain, source tag ke saath (Admin / App). **Admin ko sab logs edit/delete karne ka access hai**, chahe wo app se aaye ho ya manual.

Field changes (current form se)

✕ **Remove karo:** - Fuel Expense (₹) & Litres - M. Oil Litres / Other Stores Used

✕ **Remove karo:** - Officer Designation

⚡ **Optional kar do** (required na rakho): - Head of Account - Officer Name

✓ **Add karo (naye fields):** - **Night/late shift? (Yes/No toggle)** — agar Yes, to bill mein us din ke liye contract wala night charge add hoga - **Toll/FASTag paid (₹)** — sirf ek number field. Ye billing ke liye store hota hai; **na kisi expense module mein jaata hai, na FASTag wallet mein** — sirf duty log ke saath tag hoke month-end pe bill mein roll up hota hai

Fields jo already sahi hain (rakhne hain)

Field	Kaha se aata / kaha jaata hai
Department Contract Vehicle (dropdown)	Contract ke “Assigned vehicle” se populate

Duty Date	manual/auto (app se aaj ki date)
Journey From / To	manual
Purpose of Journey	manual, required
Driver Name (dropdown)	Contract ke "Designated driver" se populate
Duty Slip No.	auto-generated, editable
Start Odometer (KM)	manual (admin) ya app se locked
End Odometer (KM)	manual (admin) ya app se locked → Total KM = End – Start
Log Book Signatures	manual, optional

3. Module: Monthly Bill

Kab banta hai: Month-end pe, ek particular contract (department + vehicle) ke liye.

Logic: Us contract ke us mahine ke **saare duty logs** (chahe app se aaye ho ya admin ne manually dale ho) ko pick karke aggregate karta hai.

Calculation steps

1. Total KM run = SUM(End Odometer – Start Odometer) – saare logs ka
2. Extra KM = MAX(0, Total KM run – Included monthly KM)
3. Extra KM charge = Extra KM × Extra KM rate (contract se)
4. Night shift days = COUNT(logs WHERE Night shift = Yes)
5. Night shift charges = Night shift days × Night charge rate (contract se)
6. Toll total = SUM(Toll/FASTag paid) – saare logs ka
(Note: ye sirf billing line hai, kisi expense/wallet se link nahi)
7. Base rate = Monthly base rate (contract se, seedha)
8. GST-applicable amount = Base rate + Night shift charges
(Extra KM charge aur Toll total pe GST NAHI lagta)
9. GST amount = GST-applicable amount × GST% (user setting: 5% ya 18%)
10. CGST = GST amount ÷ 2
11. SGST = GST amount ÷ 2
12. Grand Total = Base rate + Extra KM charge + Night shift charges + Toll total + CGST + SGST

Bill line items (jaisa sample cash memo mein hai)

Line item	Amount source	GST applicable?
Monthly base rate	Contract	✓ Yes
Extra KM charge	Duty logs × Contract rate	✗ No
Night shift charges	Duty logs count × Contract rate	✓ Yes
Toll total	SUM from duty logs	✗ No
Subtotal (GST-applicable)	Base rate + Night charges	—

CGST (half of GST%)	Subtotal × GST%/2	—
SGST (half of GST%)	Subtotal × GST%/2	—
Grand Total (G.Total)	Sum of everything above	—

Note (future scope): Abhi sirf same-state (CGST+SGST) case cover ho raha hai. Agar kabhi different-state department ka contract aaye, to IGST wala alag flow banana padega — abhi implement nahi kar rahe.

4. Kaun kaha connect hota hai — summary

- **Contract.Vehicle** → Duty Log ka “Vehicle” dropdown
- **Contract.Driver** → Duty Log ka “Driver” dropdown
- **Duty Log.Start/End Odometer** → Bill ka “Total KM run”
- **Duty Log.Night shift Y/N** → Bill ka “Night shift charges” (count × Contract.Night charge rate)
- **Duty Log.Toll paid** → Bill ka “Toll total” (sum)
- **Contract.Base rate / Extra KM rate / Extra hour rate / Night charge rate** → sab seedhe Bill calculation mein use hote hain, kabhi Duty Log form mein nahi dikhte

5. Admin permissions

- Duty log: view all (app + manual), edit, delete — sab admin ke paas
- Contract: create, edit (rates change karne se **purane bills nahi badalte**, sirf naye bills naye rate se banenge — is behaviour ko confirm/lock karna hai)
- Bill: generate karne ke baad edit allowed hai ya finalize/lock ho jata hai — ye bhi decide karna hai (recommend: lock after generation, manual override sirf admin ke liye with reason log)
